	<input type="button" value="Reset"/>

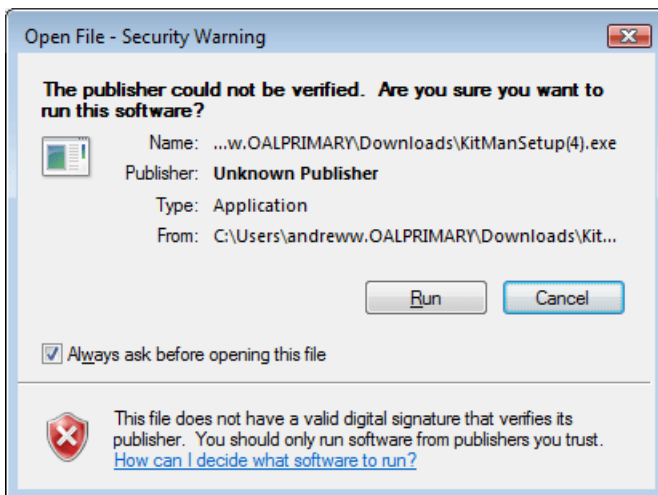

Complete all of the registration information and we will email a link to download the installer and Trial Code that you will need to install the software. Email addresses can only be registered once without prior consent from Olympus.

STEP 2 DOWNLOAD INSTALLER

You may get a warning below the address bar of the browser similar to this one.

Click "Download File" or "Allow" depending on your browser, save the file to your computer then double click to install.

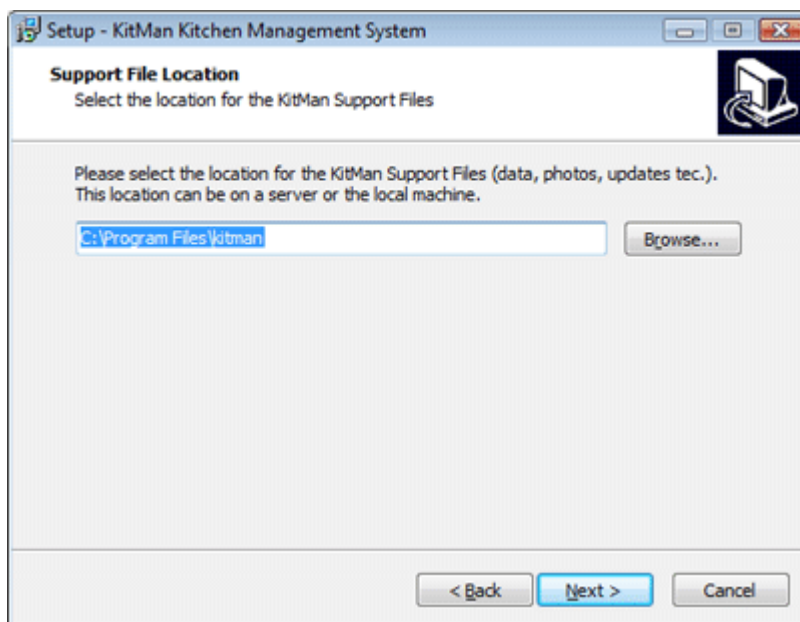

Depending on the version of Windows

STEP 3 INSTALL SOFTWARE

Running through the installer it will ask a number of simple questions the two critical ones are

Where do you want to install the application? This is normally C:\Program Files\kitman except on certain high spec PCs

The next is where do you want to install the Support Files? This includes the Live Data, training data, application updates, photos and price updates.

If you want to use KitMan on multiple PCs in your organisation then this needs to be a shared folder on a server.

Please Note: all intended users will need Full Permissions to this shared folder.

If you install the data in a shared folder the User must be connected to this folder to use the software. e.g. a Laptop would need to be connected to the organisation's network before launching the software.

Once you have installed the software there is some basic information needed to setup your outlet that is done through a configuration wizard.
